RE: Software (Staff-level) Architect - Java & Cloud

Dear **Hiring Manager**,

I am writing to apply for the **Software (Staff-level) Architect – Java & Cloud** role. Over the last nine plus years, I have grown from being a backend developer to someone who takes ownership of **system-level decisions, long-term design direction, and engineering quality**. Architecture, for me, has never been about drawing diagrams — it has been about building systems that survive **real-world complexity**.

In my current role as a **Senior Engineer for Platform and Backend System**, I have had the opportunity to work deeply on **Java and Spring Boot-based services** while also influencing broader architectural decisions. I have worked on **modernizing services to newer Java versions**, strengthening **test coverage to meet strict quality gates**, and refactoring **cloud-integrated components** to be more resilient and maintainable.

A significant part of my work has involved designing and evolving **PostgreSQL data models**, thinking carefully about **schema structure, aggregates, views, and performance optimization**. I have also worked on **healthcare-aligned service designs inspired by FHIR-based architectures**, where **auditability, correctness, and scalability** were essential. These projects shaped how I think about **system boundaries, domain clarity, and long-term extensibility**.

Beyond pure coding, I have invested in strengthening **engineering foundations**, improving **CI/CD workflows**, implementing **commit-driven versioning across multi-language projects**, enhancing **observability with structured monitoring and alerting**, and consistently raising standards around **testing and code quality**. I strongly believe that architecture is not just about how a system is built, but about how safely and confidently teams can evolve it over time.

What motivates me at this stage of my career is creating impact at a broader level, defining **technical patterns**, mentoring engineers, reviewing

designs critically, and making thoughtful **trade-offs between speed and sustainability**. I care deeply about clean **abstractions, clarity in decision-making, and building platforms** that teams trust.

At your convenience, please contact to my cell phone number, or email. It would be an incredible opportunity for me to be considered for this role. Thank you for taking the time to review my application.

Enclosed, please find my resume for your review. I will look forward to contacting you within the week so we can discuss the next step in your hiring process. In closing, thank you for your time and consideration of my candidacy.

<https://rohitml.netlify.app>

I am excited about the opportunity to contribute to your organization in a role where architectural ownership, technical depth, and long-term thinking truly matter. I would welcome the opportunity to discuss how my experience and mindset can support your engineering vision.

Thank you for your time and consideration.

With regards,

Rohit M L
